

# Table of Contents

<b>1</b>	<b>Introduction</b>	
1.1	“Twenty-Twenty Vision” .....	1
1.2	The Three Generations .....	1
1.3	Outline of Options .....	4
<b>2</b>	<b>Black-Bodies, White Suns</b>	
2.1	Introduction .....	7
2.2	Black-Body Radiation .....	7
2.3	Black-Body in a Cavity .....	10
2.4	Angular Dependence of Emitted Radiation .....	11
2.5	Direct and Diffuse Efficiencies .....	15
2.6	Black-Body Emission Properties .....	16
<b>3</b>	<b>Energy, Entropy and Efficiency</b>	
3.1	Introduction .....	21
3.2	Energy and Entropy Conservation .....	21
3.3	Carnot Efficiency .....	22
3.4	Landsberg Limit .....	24
3.5	Black-Body Limit .....	25
3.6	Multi-Colour Limit .....	27
3.7	Non-Reciprocal Systems .....	39
3.8	Ultimate System .....	30
3.9	Omnidirectional Global Converters .....	31
3.10	Summary .....	32
<b>4</b>	<b>Single Junction Cells</b>	
4.1	Efficiency Losses .....	35
4.2	Shockley-Queisser Formulation .....	38
4.3	Hot Photons (Chemical Potential of Light) .....	40
4.4	Einstein Coefficients .....	43
4.5	Photon Boltzmann Equation .....	45
4.6	General Cell Analysis .....	49
4.7	Lasing Conditions .....	50
4.8	Photon Spatial Distributions .....	51
4.9	Effect of Sample Thickness .....	54
4.10	Thermodynamics of Single Junction Cell .....	55

<b>5 Tandem Cells</b>	
5.1 Spectrum Splitting and Stacking .....	59
5.2 Split-Spectrum Cells .....	60
5.3 Stacked Cells .....	61
5.4 Two Terminal Operation .....	63
5.5 Infinite Number of Cells .....	64
5.6 Approximate Solution .....	65
5.7 Thermodynamics of the Infinite Stack .....	66
<b>6 Hot Carrier Cells</b>	
6.1 Introduction .....	69
6.2 Relevant Time Constants .....	69
6.3 Ross and Nozik's Analysis .....	72
6.4 Simplification for $E_G = 0$ .....	77
6.5 Würfel's Analysis .....	77
6.6 Possible Low Dimensional Implementation .....	79
<b>7 Multiple Electron-Hole Pairs per Photon</b>	
7.1 Introduction .....	81
7.2 Multiple-Carrier Photon Emission .....	82
7.3 Limiting Performance .....	85
7.4 Comparison with Würfel's Analysis .....	85
7.5 Possible Implementation .....	86
7.6 Generalised Analysis .....	86
7.7 Raman Luminescence .....	88
<b>8 Impurity Photovoltaic and Multiband Cells</b>	
8.1 Introduction .....	95
8.2 3-Band Cell .....	97
8.3 Photon Absorption Selectivity .....	98
8.3.1 Finite Bandwidths .....	98
8.3.2 Graded Absorption Coefficients .....	100
8.3.3 Spatial Absorption Partitioning .....	100
8.4 Absorption Leakage Loss .....	102
8.5 Other Possible Multigap Schemes .....	104
8.6 Impurity Photovoltaic Effect .....	106
8.7 Up- and Down-Conversion .....	107
<b>9 Thermophotovoltaic and Thermophotonic Conversion</b>	
9.1 Introduction .....	111
9.2 Solar Thermal Conversion .....	113
9.3 Thermophotovoltaic Conversion .....	114
9.3.1 Black-Body Source .....	114
9.3.2 With Narrow Passband Filter .....	116
9.3.3 Solar Conversion: Cell/Receiver .....	117
9.4 Thermophotonics .....	118

---

9.4.1 Case with Filters .....	118
9.4.2 Without Filter .....	122
<b>10 Conclusions</b> .....	<b>125</b>
<b>Appendices</b>	
A: Greek Alphabet .....	127
B: Physical Constants .....	129
C: Fermi-Dirac and Bose-Einstein Integrals .....	131
D: List of Symbols .....	137
E: Quasi-Fermi Levels .....	139
F: Solutions to Selected Problems .....	147
<b>Index</b> .....	<b>159</b>
